Cloud services at the Internet's edge

The BCDRaaS and Cloud platforms offered by OneIT are some of the easiest, and most secure, to connect to in the world. We locate our environments inside the most stringently operated and highly certified carrier hotels, bringing on-net connectivity to nearly any network to our client's deployment.

What value does this dense connectivity deliver to our clients?

Unparalleled network carrier choice
- This ensures the most competitive pricing available for bandwidth/private connectivity
- Access to over 450 network providers
- Maximum choice to retain adaptability in the ever-changing carrier market
- Access to 2 separate submarine cable systems enabling direct fiber connectivity to Central and South America as well as the Caribbean
- Private, secure and high availability relative to using public Internet to access our cloud

Leading edge network carrier solutions allow clients to access massive bandwidth

Ensures any redundancy solution the client desires can be met with ease

The lowest latency possible is realized
- Carrier services are not backhauled; all originating equipment is inside the data center

Dark fiber assets are plentiful, bringing never-before-seen speeds and security to client environments

For clients looking for a combination of private and public cloud offerings, OneIT has direct onramps to:
- Amazon Web Services
- Google Cloud Platform
- Microsoft Cloud (Microsoft Express Route)
- IBM
- SoftLayer

Clients are able to meet their bandwidth needs today, while future-proofing their needs tomorrow

OneIT is connected to the Internet Exchanges in markets where we deploy our cloud services. For clients who desire public Internet connectivity into our environment, this provides the fastest speed and lowest latency possible
