

DataVault™

Custom Designed BCDRaaS Solutions

OneIT, Inc. combines best practices in architecture design and service delivery to create one-of-a-kind IT environments for discerning customers: Customers who require 100% availability of their IT and business systems

DataVault™ Specifics

DataVault™, designed by OneIT, is a highly customized BCDR & data backup solution developed to meet the specific, yet varying, requirements of any company. On premise, off premise, and tertiary sites combine to offer unprecedented customization, usability and uptime.

Customization Options

With DataVault™, clients choose specifically the type of BCDR environment they would like to create, and then OneIT designs, deploys, and manages it. Options include:

Number of Sites:

- On premise
- Off premise/cloud/hybrid
- Tertiary cloud

Recovery:

- Data only
- Ability to stand up
- Can be customized per site

Servers and Apps:

- All servers/apps
- Some servers/apps
- Treat servers/apps differently per site

Recovery:

- Custom RPO
- Custom RTO
- Near zero data loss for recovery

Security:

- OneIT builds to any compliance criteria required

Customization process:

After a complimentary assessment is performed, and the above selected criteria are applied, OneIT designs a one-of-a-kind environment that meets the specific needs of the client, right down to the storage amounts, CPU and RAM required. No solution is “off the shelf,” nor do clients pay for extra storage or compute quantities that are unneeded.

Advantages of using DataVault™

- ✓ DataVault™ was developed with ease of use and transparency in mind. It's a fully managed solution, however clients always have access to their data and can search it based on keywords, by user, by file, by date, etc.
- ✓ OneIT performs all of the uplift of our client's environment into our BCDR solutions, as well as provide complimentary training. It's true white-glove service that other providers don't offer.
- ✓ No capital investment is required; DataVault™ works with most existing environments, whether virtual or physical.
- ✓ DataVault is an ideal replacement for legacy tape backup systems and processes.
- ✓ OneIT's cloud is located in Tier III and Tier IV carrier hotels, with access to over 130+ telecom carriers. With so many choices, clients can ensure their connectivity into their BCDR environment is as robust and inexpensive as possible.
